Textul lucrării:
Factors Behind Destination Loyalty - A Study on Tourism Destination ABSTRACT Tourism provides significant socioeconomic opportunities for the people in any country. This study examines the factors associated with tourist satisfaction in Bangladesh. It includes a total of 202 randomly selected tourists in Bangladesh. The results show that tourists are satisfied with the destination. The results also show that it appears that tourist satisfaction in general may depend on transportation, accommodation, level of expenditure, foods and security in the area. However, multivariate analysis reveals that transport and accommodation are the most important factors for tourists' satisfaction. Thus, the government should improve the transport and accommodation facilities are imperative for the sustainable development of tourism industry in Bangladesh. Key words: Tourist, Satisfaction, Destination, Repeat visit, and Bandwidth.
JEL Classification: L83, K41

>INTRODUCTION Tourism is considered as one of the largest, most dynamic and fast-growing economic sectors

In the world (Nelson and Mau, 2008), it provides significant volume of job opportunities for the countries and offers different profiles of investment in its different forms (Zahariaea, 1989).

>Tourism is the main source of national income and balance of payments

of many countries. In Mexico, Indonesia and Thailand (Pramudita, Marzuki et al., 2009). For the assessment of economic growth and its sustainability, tourism sector is given the priority by all concerned actors in many countries. However, sustainable tourism development requires proper knowledge and understandings about tourist behavior. This includes how a tourist selects the destination to be visited and the factors that influence the tourist's choice. The destination selection depends on several factors such as natural beauty, cost effectiveness for visit, available facilities, and availability of relevant services. Thus competitiveness of a destination makes marketer's choice to offer better tourist products and services. The destination selection is influenced by the quality of service provided by the destination of the places and when a destination offers required services for the tourists, it is perceived to be attractive (Chen et al., 2011; Kammerud et al., 2009). tourist satisfaction about a destination has also been playing important role in the planning of products and services (Yoon and Oysak, 2009). The presence of tourist-friendly atmosphere in a destination not only ensures tourist satisfaction but also increases the number of tourists. On the other hand, presence of negative factors, such as terrorism, hijacking, and fraud cut down tourist flow to the place. Destination loyalty is another desired outcome of tourist satisfaction (Omar and Hussain, 1994; Farhan, Marzuki et al., 2009).

>Yoon and Oysak, 2009. Tourist behavior related to selecting a

destination for repeated visit is a complex mechanism of their desired services and ability to pay, which refers to the classical demand-supply proposition in a particular socio-ecological context. Thus, an understanding of destination factors and tourist satisfaction.

34 is important in the decision making process of the tourist

tourist industry and its development in context.

35 This study is an attempt to examine the factors associated with tourist satisfaction

In Bangladesh scenario & BANGLADESH CONTEXT AND STUDY SITE Bangladesh is a poor and small country located in the South Asia. There are many tourist destinations in Bangladesh such as Cox's Bazar, Sandwari, Sylhet, Rangamati, Khagrachari, Bandarban and Saint Martin islands. I have chosen Bandarban as a field area of this study purposefully because of its attractiveness among tourists. Bandarban is one of the most attractive destination in Bangladesh due to its natural beauty of Bandarban. Millions of domestic and international tourists visit the places every year. However, most of the tourists are domestic and they usually come from other parts of the country. The visit to Bandarban is cost effective and it is a good place to go for vacation. The tourism sector has been growing rapidly. Therefore tourist spots, Bandarban is likely to attract significant number of foreign tourists. This may be related to the lack of proper facilities and services leading to tourist non-satisfaction. This paper attempts to examine these factors associated with tourist satisfaction. Specifically the study includes five variables namely level of expenditure, accommodation, transport system, food, and security

36 to examine the associated factors of tourist satisfaction in Bangladesh

This study makes significant contribution to the existing literature, as it will try to uncover the underlying factors that are associated with tourist satisfaction and dissatisfaction levels. Though the study takes Bangladesh as a case, this is expected that, the findings are applicable to similar settings in other countries.

CONCEPTUALISING TOURIST SATISFACTION Literature on tourist satisfaction and destination loyalty provides useful understandings of destination conceptual and hypothetical for the study. Marketing literature reveals that satisfaction is the outcome of expectation about and performance of the offerings.

As it is found from

37 the expectation-disconfirmation model of Oliver (1980), consumers develop expectations about a product before purchasing.

Studies revealed when a product delivers more than expectation, it creates positive disconfirmation, customers become satisfied and vice versa (Yoon and Uysal, 2006; Hoffman and Bateson, 2002). On the other hand, when performance does not match the expectation, it leads to negative disconfirmation, and customers become dissatisfied (Yoon and Uysal, 2006; Hoffman and Bateson, 2002). This concept can be used to understand tourist satisfaction in relation to their expected role in a destination. Uncertainty about the service delivery may have different factors associated thereto. Different tourists may have different degrees of satisfaction or dissatisfaction. Chadee and Matteson (1998) study four variables of tourist satisfaction –

38 eating out, accommodation, sightseeing and renting a car.

This study finds significant differences between different cultures of tourists in regard to satisfaction. Coggin and Pearce (2010)

39 examines the links between travel motivations, activities, emotions and satisfaction levels of tourists.

They argue that satisfaction level does not follow the pattern of emotional variability, it is also related to expectations and motivation of tourists to the destination. Okello and Yerian (2009) reveals that tourist satisfaction of a destination is dependent on its

40 tourist attractions, accommodation facilities, and tour services. They argue that most tourists hold clear expectation about their tour. The level of

expectation of tourists further defines their degree of satisfaction. Studies reveal that tourists' satisfaction is the composite of physical factors of a destination as well as psychological aspects of tourists (Huang, Scott et al, 2012). This argument can be more stronger if additional factors such as foods, security and level of expenditure are considered for investigation. Destination loyalty is another important phenomenon that directs the level of

41 tourist satisfaction. Destination loyalty is the outcome of tourist satisfaction with

the place visited. Repeat visits, recommendations and

42 positive word-of-mouth are most referred to consumer loyalty

(Hoffman and Bateson, 2002).

43 Yoon and Uysal, 2006), the concept of loyalty is

most desirable for all successful marketers. When tourists become satisfied with a destination, they become loyal and recommend the destination to their family or relatives, or even they can visit the destination again. The level of tourist satisfaction is often required for a clear understanding about destination loyalty. The concept of destination loyalty is discussed in detail in the following section IV. VARIABLES AND HYPOTHESES Transport System The transport system of a destination is highly important. It is the means to reaching places for enjoying all charms. Transport system includes roads, river, rail, air, and sea. Transport system is the backbone of a destination. Transport system is the most important. Good transport of a tourist destination increases tourist satisfaction. Accommodation Tourists who visits places far from home need accommodation facility. It does not mean only an arrangement of a temporary place to stay but also the quality of the accommodation facility. Good accommodation facility increases the number of tourists. H2: Good accommodation increases the degree of satisfaction toward the destination. Level of expenditure The level of expenditure and budget provisions may influence tourist satisfaction. The higher the level of expenditure, the more tourists are satisfied. Hypothesis H3: Minimum the costs maximize the satisfaction and increase number of tourists. Foods People visit different places with varied cultures. Destination attractiveness may depend on the availability of foods of certain culture. Foods are the basic needs of humans. Foods are the main factor that influences tourists' satisfaction and tendency of repeat visits. Security system People visit places for recreation and enjoyment. Hence, they always expect secured visit. Thus security in a tourist spot may increase people's confidence and satisfaction. Ho: Secured destination attracts more tourists and makes them satisfied.

Tourist Satisfaction

44 Tourist satisfaction and destination loyalty are unidirectional. Tourist satisfaction depends on the

expectation about tourism services. The overall satisfaction about a tourist place makes them loyal. A loyal tourist recommends the place to others. This study measured tourist satisfaction as to whether tourists recommend the place to others. IV.

45 METHODOLOGY Research Approach The study followed quantitative approach. Data were collected from the tourists rating various tourist destinations in the Bandarban district, Bangladesh. Structured questionnaire

was used to collect the data.

46 Initially, a total of 250 tourists were randomly included in the survey.

Questionnaires were supplied to the respondents based on convenience of field surveyor. Respondents in the survey were selected under three tourist spots of Bandarban. However, the spot selection was based on judgment. Data Collection

47 The participation of respondents was voluntary and mail intercept interview method is used to collect data (Malhotra, 2004). Questionnaire was prepared with the help of previous research and review of related literature. There were 23 items in the questionnaire under six constructs for measuring tourist satisfaction. Each of the constructs was measured based on different items related to that construct.

48 Respondents were asked to indicate the degree of their agreement or disagreement with each item using five-point Likert Scale where 1= strongly disagree

and 5=strongly agree. Demographic factors of tourists were also included in the questionnaire. Study Variables Based on the above discussion, the following All the explanatory variables were measured conceptual framework has been derived, with some selected indicators under each construct category. This has been done to measure the variables in a better way. The following variables were measured with the help of previous research and review of related literature. There were 23 items in the questionnaire under six constructs for measuring tourist satisfaction. Each of the constructs was measured based on different items related to that construct.

49 Analysis Out of 250 respondents, a total of 202 successful responses are considered for analyzing the data. The remaining 48 questionnaires are dropped for non-response.

Descriptive statistics like

50 mean and standard deviation were used to know the

average value of the data in each explanatory variable. The paper examines pair wise correlation to know the relationships among variables under study. A bivariate correlation between the variables was calculated. The results of the correlation analysis showed that the correlation coefficient values run to identify the significant explanatory variables to the dependent variable. Both Spearman and SPSS were used to analyze the data. V. RESULTS AND DISCUSSION Sample Characteristics

51 Of the sample 45.5% belongs to 25 years age group, 43.1% belongs to 25-35 years, 11.4% ranges between 35 years and above age group, 80.7% respondents are male and 19.3% are female tourists.

48.5% of tourists are currently married, 18.8% of tourists are service holder in different sectors; 43.8% are students, 23.8% are business people, and 10.9% of the respondents come from other categories. The data show that most of the tourists are below 25 years old who are assumed to be students (48.5%). Data also show that male tourists possess more outing tendencies than the females. Total 202 tourists were interviewed. The mean age of the respondents is 25.14±3.15. Total 202 tourists 16.40 2.5279 Level of expenditure 202 16.37 ± 3.7378 5.9 10.25 9.2 45.1 25-35 9.18 47.35 ± 3.7129 Total 202 100 Sex Male 163 80.7 Female 39 19.3 Total 202 100 Marital status Unmarried 105 52.3 Married 93 47.7 Single 10 5.0 Divorced 4 2.0 Widowed 1 0.5 Other 2 1.0 Total 202 100 Source Field data Factors associated with Tourist Satisfaction

Bivariate correlation was conducted between the variables to explore the significant factors associated with tourist satisfaction. The results of the correlation analysis are shown in Table 2. Results show that accommodation, level of expenditure, food, accommodation, and security are significantly and positively correlated with tourist satisfaction (see Table 2). Data also reveals significant positive correlation between food and accommodation, food and security, and accommodation and security are correlated. Therefore, bivariate analysis of the data justify about inclusion of all the explanatory variables in the multivariate analysis of tourist satisfaction in the Masudpur site. 20 Table 2. Correlation matrix 25 Accommodation and food are highly correlated. The correlation coefficient between food and accommodation is 0.46. mms Transport and Food Services 202 16.37 ± 3.7378 5.9 10.25 9.2 45.1 25-35 9.18 47.35 ± 3.7129 Total 202 100 Tourist action desire n % Satisfied 1 10 Level of expenditure 33% 1.00 Accm mms Transport and Food Services 202 16.37 ± 3.7378 5.9 10.25 9.2 45.1 25-35 9.18 47.35 ± 3.7129 Total 202 100

38% 1.00 Security 2.5279 ± 3.7378 5.9 10.25 9.2 45.1 25-35 9.18 47.35 ± 3.7129 Total 202 100 Note: *p<0.05. Source: Field data From the

above results, the hypothesized relationship among explanatory variables in respect of tourist satisfaction are supported by the significant ($p < 0.05$). Table 3. Results of regression analysis show that transport system of a tourist destination increases tourists' satisfaction ($R^2 = 0.334$)* Significant Hypothesis Correlation coefficient 0.339** Test Result Ho: Good accommodation increases the degree of satisfaction

toward the destination 0.33** Significant H3 minimum the costs maximize the satisfaction and increases number of tourists. Significant H4 The availability 0.33** Significant of desired foods increases satisfaction and tendency of repeat visits H5 Secured 0.26* Significant destination attracts more tourists because tourists feel safe and secure. Significant H6 Transport facilities improve tourist satisfaction while controlling for other variables. Data suggests that transport facility is a tourist destination significant factor. Transport facilities improve tourist satisfaction. Transport facilities improve tourist facilities improve the tourist satisfaction decreases in Bangladesh context. This result contradicts with the conventional views that transport facilities increases satisfaction of the tourists. This is possible in Bangladesh context because tourists feel safe and secure in Bangladesh context. Transport facilities are important in the destination. However, it requires further research to discover this fact in Bangladesh. The coefficient of correlation between accommodation and tourist satisfaction is also still significant, indicates that the increase in the availability of accommodation increases the satisfaction of tourists. Good accommodation system in fact, has positive impact on tourism destination (Chadha and Maitra, 1998; Table 4. Results of Multivariate Probit Regression Model Parameter Estimate a Std. Err. b

2a2 Sig. 95% Confidence Interval Lower Bound Upper Bound

Transport System .081 .023 -.553 -.000 -.126 -.036 Accommodation .112 .028 1.432 .000 .047 .156 Security System .028 .020 1.268 .205 -.014 .063 Foods .007 .023 .316 .752 -.038 .053 Level of Experience .042 .027 -.154 .124 .054 .011 Note: *Indicates significance at 1% level Source: Field data
Security system is a significant factor to destination choice in Bangladesh. Transport system is also significant in this study. Tourists security is a considering factor to destination choice in Bangladesh. This issue is still vulnerable. Tourists believe that if security is ensured in a destination, tourists become more satisfied. Food is also a significant factor to destination choice in Bangladesh. Security system is also significant. Result finds that the increase of availability of desired food items increases the level of satisfaction. The result shows that relationship is not significant in regard to multivariate analysis. The result shows:

2bNegative relationship between the level of expenditure and tourist satisfaction.

Though, this relationship is not statistically significant, this result supports the contextual views—the increase of expenditure decreases the level of satisfaction. Transport system has sound negative impact on tourists' satisfaction. Security system has sound positive impact on tourists' satisfaction. 45% of the tourists (46.5%) are from student category. They are not sensitive about comfortable transport facilities. By nature, Bangladeshis young can work hard, so they can feel comfort to use any type of transport even if it is not comfortable. Security system is a significant factor to destination choice in Bangladesh. This issue is still vulnerable. So, they cannot afford the add cost. It is noteworthy to mention that variables studied in this research can explain only 22.1 % of the relationships which is found from R-square result. So, many other variables remain unexplored. Therefore, more research is required to explore these variables. In this case, further study is imperative to understand the factors associated thereto. Influence of Demographic Variables This study also includes four demographic variables in the analysis of data. Results show that

2cThere is a significant and positive association between marital status and satisfaction

level of tourists (see Table 5). Table 5: Association between Tourists' Satisfaction and Demographic Variables Tourists' satisfaction Chi-square (X²) Degrees of freedom (df) Probability (p) Age 22.17 20 0.479 Gender 1.00 1 0.316 Income 1.00 1 0.316 Education 1.00 1 0.316 Note: *Indicates significance at 0.05 level. Source: Field data Satisfaction and loyalty are post-purchase behaviors measuring whether the particular purchase fulfill customer expectation or not (McDowell, 2010). The

2dRelationship between tourist satisfaction and destination loyalty can be probed with the findings of

previous literature

2eOn customer satisfaction and loyalty, Most of the

studies

2fOn customer satisfaction and loyalty confirm the influence of satisfaction on loyalty

Vesel and Zalikar (2009) argue that customer satisfaction

2gContributes to customer loyalty and satisfaction has very strong influence on loyalty

Yoon and Uysal (2005) argue that a satisfied customer purchase the product again and become loyal to the brand. Satisfaction is measured by how well a product meets customer expectation, and loyalty toward a brand is measured in terms how often tourists are willing to return to produce positive words about the destination. McDowell (2010) argues that marketing implications of destination to increase customer loyalty. Hernández-Lobato, Solla-Radilla, et al. (2006) finds strong relationship

2hAmong destination image, tourist satisfaction and destination loyalty, This study

further argue that destination loyalty in many cases might be influenced by the degree of availability of supplementary products, specialized service offered, and general quality of the customers. A tourist, for example, can be more likely to have high satisfaction from the destination if the destination's particular spot needs to be examined with the help of empirical evidences. VI. CONCLUSION Destination image is a key element in destination marketing. The destination image is a major factor with tourist satisfaction in Bangladesh context. Destination choice, in fact, is one of the primary concerns of all tourists. A destination becomes attractive for various reasons. When a tourist destination offers facilities to tourists, they are likely to visit that destination. The study, however, reveals that transport system and accommodation facility are the most influential variables in tourist satisfaction and destination loyalty. Hence, tourists are often willing to pay extra money for a destination that offers good facilities. Satisfaction in a tourist destination is another concern to be considered by the tourist actors is demand-supply proportion. Tourists visit a place to get benefits from the products or services that they need and that are offered by the tourists. Therefore, destination managers must ensure that there should be a balance between the tourists and the facilities. Therefore, government, developers and marketers must continue to ensure facilities available for the development of Bangladesh as a tourist hotpot in Bangladesh if the site offers all the facilities desired by the tourists. They can attract more tourists from home and abroad. The

2iKnowledge and understanding of consumer choice criteria and attitudes would be of great help both for tourism researches and commercial

firms. REFERENCES 1.
